How to print multiple slides in a PDF file on one page?

I will continue to provide the lecture slides in PDF format, one slide per page. Obviously this can be very paper consuming for those of you wanting to print them out. You may arrange the slide in several useful ways though so that they don't require as many pages. Here's how:

Using Adobe Acrobat, or Adobe Acrobat Reader. In the Print dialog, pull down Page Scaling and select "Multiple pages per sheet." Then in Pages per sheet, specify "Custom…" and 2 by 3, or other layout you desire. You can also print page border by checking the corresponding box.
